

Every day, we detect data leaks that others don't.

CybelAngel is a leading digital risk management platform providing actionable threat intelligence

● **VISIBLE WEB**
ex: Social media, collaboration platforms

Superior internet scanning technology, backed by AI and years of machine learning evolution, battle-tested by our enterprise customers in the US and Europe.

● **DEEP WEB**
ex: Pastebin

Continuous monitoring of every layer of the internet, including connected storage devices. [Learn more on back.](#)

● **DARK WEB**
ex: Tor forums

Instant alerts to your most critical data leaks, supplemented with actionable remediation steps optimized for ease of use.

● **CLOUD-HOSTED CONTENT**

● **CONNECTED STORAGE**
ex: IPv4, NAS drives, FTP servers, NFS drives, rsync backups, databases

Support from our expert cybersecurity analysts that maintain intimate knowledge of your business and investigate your data leaks for you.

Delivered through the CybelAngel SaaS portal, your threat intelligence HQ

Provides CISOs, IT operations professionals, and security analysts with the tools they need for comprehensive digital risk management, as well as an interface for access to CybelAngel analysts.

CybelAngel monitors data leaks for:

“CybelAngel is the best-performing data leak detection technology known today”

Jean-Yves Poichotte, Global Head of ITS Cyber Security at Sanofi

Why do enterprises choose CybelAngel over the competition?

CybelAngel combines superior technology with keen human analysis. Instead of unduly relying on one or the other.

CybelAngel provides curated data leak alerts that direct our customers' attention to critical threats. Instead of bombarding customers with unfiltered output and false positives.

CybelAngel scans **internet-connected storage devices**, where most critical data leaks are occurring.

Focus on **Connected Storage Devices**

93% of the most critical data leaks that CybelAngel finds for customers result from connected storage exposures.

Why?

- Proliferation of enterprises' use of third-party vendors, suppliers, and contractors that access and share data through their connected devices.
- Many connected devices are insecure by design, with vulnerable default security configurations.
